The Internet of Things is an emerging topic of technical, social, and economic significance. An effort is being made to ensure objects (like Consumer products, durable goods, cars and trucks, industrial and utility components, sensors, and other everyday objects) are combined with internet connectivity and powerful data analytic capabilities that promise to transform the way we work, live, and play. In conclusion the speaker suggested that the Internet of Things (IOT) represents the next evolution of the internet. Given that humans advance and evolve by turning data into information, knowledge, and wisdom, IOT has the potential to change the world as we know it today-for the better.
